Uniform Rules for European Contract Law? Francisco de Elizalde 2018-06-28 Over the last 30 years, the evolution of acquis communautaire in consumer law and harmonising soft law proposals have utterly transformed the landscape of European contract law. The initial enthusiasm and approval for the EU programme has waned and, post Brexit, it currently faces increasing criticism over its effectiveness. In this collection, leading academics assess the project and ask if such judgements are fair, and suggest how harmonisation in the field might be better achieved. This book looks at the uniform rules in the context of: the internal market; national legislators and courts; bridging the gap between common and civil law; and finally their influence on non-member states. Critical and rigorous, it provides a timely and unflinching critique of one of the most important fields of harmonisation in the European Union.

Progress in Optics Emil Wolf 2001-12-31 This volume presents six review articles devoted to various topics of current interest both in classical and in quantum optics. The first article, by S. Ya. Kilin, entitled "Quanta and Information", is concerned with a multidisciplinary subject which involves optics, information theory, programming and discrete mathematics. The second article, "Optical Solitons in Periodic Media with Resonant and Off-Resonant Nonlinearities", by G. Kurizki, A.E. Kozhekin, T. Optatrny and B. Malomed, reviews the properties of optical solitons in periodic nonlinear media. The article which follows deals with an effect and its inverse which is a manifestation of hindrance and enhancement, respectively, of the evolution of a quantum system by an external agent, such as a detection apparatus. The fourth article discusses the current status of a relatively new branch of physical optics,

sometimes called singular optics. The next two articles respectively present a review of advances in two-photon interferometry and their relation to investigations of the foundations of quantum theory and an examination of transverse mode shaping and selection in laser resonators.

Modern Admiralty Law Aleka Mandaraka-Sheppard 2006-12-15 Lucidly explaining the legal principles of Admiralty Law in a modern context, this new edition has been fully revised and updated to include recent case law and legislation, including extensive treatment of developments within the EC. Examining the law within a commercial perspective with suggestions for how legal risks should be managed, this is the ideal text for postgraduates studying admiralty or shipping law as well as professionals within the shipping industry. The intricate rules of the Brussels/Lugano Conventions are explained alongside conflict of jurisdictions, and the application of the forum non-conveniens, doctrine and forum shopping. Breach of jurisdiction agreements and remedies are also discussed and the vexed issues of anti-suit injunctions are dealt with comprehensively. Modern Admiralty Law analyses the corporate structures of ship owning companies and the circumstances in which the corporate veil may be pierced; suggestions for legitimate corporate structures for the purpose of risk management are also put forward. The consequences of non-compliance with the ISM Code are considered (such as potential criminal liability, the effect of non-compliance upon insurance contracts and limitation of liability), alongside an update of further measures being taken by the EC and the IMO on safety of ships and cleaner seas. An ideal reference tool, the new edition of this popular and comprehensive text includes summaries of the principles and case law and encourages further investigation. The practical and commercial orientation of this book will be of great benefit to readers studying the subject as an academic discipline as well as those who work in the area. From admiralty jurisdiction to limitation of liability, all aspects of admiralty law are thoroughly investigated, with recent developments providing new insights for this modern approach to admiralty law. This new edition is essential reading for postgraduates, practitioners, ship owners and managers, and a wide range of professionals within the shipping industry.

Basic Algebraic Geometry 1 Igor R. Shafarevich 2013-08-13 Shafarevich's Basic Algebraic Geometry has been a classic and universally used introduction to the subject since its first appearance over 40 years ago. As the translator writes in a prefatory note, ``For all [advanced undergraduate and beginning graduate] students, and for the many specialists in other branches of math who need a liberal education in algebraic geometry, Shafarevich's book is a must.'' The third edition, in addition to some minor corrections, now offers a new treatment of the Riemann--Roch theorem for curves, including a proof from first principles. Shafarevich's book is an attractive and accessible introduction to algebraic geometry, suitable for beginning students and nonspecialists, and the new edition is set to remain a popular introduction to the field.

Claims for Contribution and Reimbursement in an International Context Kōji Takahashi 2000 A contribution claim arises from a complex situation involving at least three parties (the original claimant, the contribution claimant and the respondent to the contribution claim). If the situation contains international elements, the complexity is exacerbated by the involvement of multiple jurisdictions and legal systems. This book provides a valuable guide to this complex area of law for practitioners advising clients who wish to bring, or are being threatenedwith, a claim for contribution or reimbursement in an international context.

Basic Algebraic Geometry 2 Igor R. Shafarevich 2013-08-31 Shafarevich's Basic Algebraic Geometry has been a classic and universally used introduction to the subject since its first appearance over 40 years ago. As the translator writes in a prefatory note, ``For all [advanced undergraduate and beginning graduate] students, and for the many specialists in other branches of math who need a liberal education in algebraic geometry, Shafarevich's book is a must.'' The second volume is in two parts: Book II is a gentle cultural introduction to scheme theory, with the first aim of putting abstract algebraic varieties on a firm foundation; a second aim is to introduce Hilbert schemes and moduli spaces, that serve as parameter spaces for other geometric constructions. Book III discusses complex manifolds and their relation with algebraic varieties, Kähler geometry and Hodge theory. The final section raises an important problem in uniformising higher dimensional varieties that has been widely studied as the ``Shafarevich conjecture''. The style of Basic Algebraic Geometry 2 and its minimal prerequisites make it to a large extent independent of Basic Algebraic Geometry 1, and accessible to beginning graduate students in mathematics and in theoretical physics.
