Evolution Education Around the Globe Hasan Deniz 2018-06-21 This edited book provides a global view on evolution education. It describes the state of evolution education in different countries that are representative of geographical regions around the globe such as Eastern Europe, Western Europe, North Africa, South Africa, North America, South America, Middle East, Far East, South East Asia, Australia, and New Zealand. Studies in evolution education literature can be divided into three main categories: (a) understanding the interrelationships among cognitive, affective, epistemological, and religious factors that are related to peoples' views about evolution, (b) designing, implementing, evaluating evolution education curriculum that reflects contemporary evolution understanding, and (c) reducing antievolutionary attitudes. This volume systematically summarizes the evolution education literature across these three categories for each country or geographical region. The individual chapters thus include common elements that facilitate a cross-cultural meta-analysis. Written for a primarily academic audience, this book provides a much-needed common background for future evolution education research across the globe.

Envisioning the Future of Online Learning Johan Eddy Luanan 2016-06-10 This book shares insights into the various ways technology can be used for educational purposes, utilizing an approach suitable for both novice and advanced practitioners in this niche area. It features selected papers presented at the International Conference on e-Learning 2015 (ICeL 2015), where professionals discussed how technology can not only serve as a tool in the classroom, but as the classroom itself. As the title "Envisioning the Future of Online Learning" suggests, this book showcases current best practices in the field of e-learning, where technology has been leveraged to re-engineer the landscape of education, particularly in the context of Malaysia.

Empowered Educators in Australia Dion Burns 2017-04-03 BEST PRACTICES FROM AUSTRALIA'S HIGH-PERFORMING SCHOOL SYSTEMS

Empowered Educators in Australia is one volume in a series that explores how high-performing educational systems from around the world achieve strong results. The anchor book, Empowered Educators: How High-Performing Systems Shape Teaching Quality Around the World, is written by Linda Darling-Hammond and colleagues, with contributions from the authors of this volume. The authors of Empowered Educators in Australia take an in-depth look at the policies and practices surrounding teaching quality in two different states: New South Wales (NSW) and Victoria. NSW offers significant support for government schools in areas such as staffing and teacher professional development. Victoria operates a highly devolved school system. Each provides a contrasting view of how federal and state policies combine to shape learning outcomes for students in Australia. The interplay between state and federal policy characterizes an intriguing "centralizing decentralization." Initiatives to create national curricular, teaching, and teacher education standards all sit in balanced tension with a movement towards greater devolution of authority to schools. Together the NSW and Victoria case studies provide insights into policies that can support high-quality teaching in a federal education system. Australia's current educational reforms place increasing emphasis on issues of teaching quality, reshaping teaching as a standards-based, evidence-informed profession, and one that seeks to foster collegiality and professional exchange. These reforms encompass many aspects of a system that supports teaching quality, and highlight: the way teachers are trained, how they are inducted into the teaching profession and supported with mentors, the professional learning they receive, how they are appraised on their work, and the career pathways for teachers.

Data Ethics of Power Hasselbalch, Gry 2021-12-09 Data Ethics of Power takes a reflective and fresh look at the ethical implications of transforming everyday life and the world through the effortless, costless, and seamless accumulation of extra layers of data. By shedding light on the constant tensions that exist between ethical principles and the interests invested in this socio-technical transformation, the book bridges the theory and practice divide in the study of the power dynamics that underpin these processes of the digitalization of the world.

Miracle of Education Hannele Niemi 2016-11-25 "Finnish pupils' success in international student assessment tests and the characteristics of the Finnish educational system are the focus of interest all around in the world. The significance of Finnish educational policy and societal atmosphere are continuously discussed. This book provides explanations, answers and reflections to these questions. Over 30 expert authors have contributed to this book by bringing their own specific research-based points of view. The second edition of the book introduces the new national curriculum for basic education that now provides guidelines for school-based curricula. Students' learning with engagement and schools as learning communities are core visions of the reform. The authors also reflect on the PISA 2012 results. The book gives an example on how to use PISA information for national improvements. In Finland, all evaluations are enhancement-led and this also includes PISA measurements. The book illustrates how teaching and learning of different subjects is realized in Finnish schools and describes the essential characteristics and methods of teaching, learning materials and research on these issues. The book provides important insight and reflections to international researchers, teachers, students, journalists and policy makers, who are interested in teaching and learning in Finnish schools. It shows the results of the systematic and persistent work that has been done on education and schooling in Finland. The main features of education in Finland are: Strong equity policy. Teachers as autonomous and reflective academic experts. Flexible educational structures and local responsibility for curriculum development. Evaluation for improvements, not for ranking. No national testing, no inspectorate. Research-based teacher education. Teachers' high competence in content knowledge and pedagogy. Trust in education and teachers."

Tests that Teach Karen Tankersley 2007 Now that the No Child Left Behind Act has left its mark on public education, educators across the United States are all the more invested in preparing their students for state and national assessments. In *Tests That Teach: Using Standardized Tests to Improve Instruction*, Karen Tankersley guides you with proven tips and instructional strategies to help your students perform to their potential. Covering all core contents areas—language arts, social studies, math, and science—and respecting all levels of student performance, Tankersley *Examines the various types of questions that routinely appear on these assessments; *Provides sample multiple-choice and constructed-response questions from the tests; *Offers guidelines on how to create daily lessons that encourage students to practice the skills and demonstrate the knowledge they'll need to use on the high-stakes tests; *Suggests word lists, games, discussion topics, and testing ideas for your classroom; and *Describes how school staff can create a learning community that fosters collaboration among teachers and high performance in students. Also included are a wealth of online resources for lesson plans, daily classroom activities, and virtual field trips, as well as links to every state's released materials on its own assessment. As Tankersley explains, teaching students the skills they need to do well on constructed-response tests will better prepare students both to score well on state and national assessments and to take their place as thoughtful and organized thinkers in a rapidly changing, competitive society.

A New Psychology of Women Hilary M. Lips 2016-05-04 Rich, original, and transformative, the latest edition of *A New Psychology of Women* examines how gender-related expectations interact with other cultural assumptions and stereotypes, and with social and economic conditions, to affect women's experiences and behavior. Absorbing narratives centered on essential topics in psychology and global research engage readers to grasp cutting-edge insights into the psychological diversity of women. Aware that our own cultural experience colors and limits what we think we know about people, veteran educator and scholar Hilary Lips imbues her discussions with international examples and perspectives to provide an inclusive approach to the psychology of women. A wide range of new and extensively updated topics optimize readers' knowledge of how disparate perspectives from cultures throughout the world shape women's behavior and attitudes toward: health care / violence against women / poverty / labor force participation / occupational segregation / unpaid work / stereotyping and discrimination / expectations about power within marriage / female genital mutilation / theories of gender development / women's attitudes toward their bodies / use of social media / media portrayals of girls and women / women in political leadership roles Among thoroughly updated topics particular to US culture are same-sex marriage, Latina women's issues, the portrayal of women of different ethnic and cultural groups on television, and breast cancer survival rates of African American and European American women. Boxed items containing learning activities, profiles of women who helped shape psychology, and suggestions for making social changes appear throughout the text. Each chapter concludes with discussion questions, key terms, suggestions for additional reading, and Web resources.

Geography Education in Japan Yoshiyasu Ida 2014-12-01 In a globalized market where the emerging workforce will increasingly travel within their nations and abroad for work opportunities, it is valuable to learn about the international education system and practices, to assess the competition. For example, annual comparison of student performance is measured across math and science subjects globally. What is not well known is how geography educational systems compare around the world and how student success in this subject translates to learning in other courses or employment after graduation. The importance of geography in our personal, professional, and civic lives is transparent when one considers how finding one's way with a map, understanding of world cultures, or identifying spatial patterns of disease spread might influence the decisions we make. Written for a global audience, this is the first English publication on geography education in Japan, addressing some fundamental questions. What is the nature of the geography educational systems in Japan? How does the focus on content and skills in Japanese schools differ from that in other countries? This book includes 25 authors from diverse geography instruction and research experiences, making it an authoritative publication on Japan's geography education system. The contribution of this book to the larger geography educational community is sharing the key strengths, concerns, and future of this school subject in English, where previously most publications were in Japanese. It will be a useful source for researchers and teachers to understand Japan's evolving geography instruction in the past, present, and future. The 21 chapters are organized into themes, beginning with an overview of the geography education system in Japan, followed by chapters that deal with regional geography and fieldwork, teacher training, geography education's contributions to society, and a comparative study of geography education across multiple countries. The book ends with a vision of geography education in the future.

Evaluation and Assessment for Conservation Ian Spellerberg 1992-09-10 Most politicians have jumped on the conservation bandwagon, and nobody running for public office these days can afford to take an overtly anti-environment stand. The fascination that children have for nature, the generous donations people make to conservation organizations, the votes cast for 'Green Parties,' the continuing popularity of zoos and wildlife films, and the strong sales of books about the environment all provide evidence to politicians that the general public supports the idea of conservation. Conservation has become a major issue for governments. No longer is it necessary for conservationists to campaign for getting the cause on the agenda: it is already there, at least as a talking point. The issue now is how to convert this generalized interest into real action. And among the many priorities competing for attention, how is a government (or a private organization) to decide what to do first? From a very limited budget - for budgets will always be limited - what is the package of activities that is most likely to lead to the results that the public wants? Ian Spellerberg attempts to address these questions which are at the heart of modern conservation action. It is relatively easy to prescribe useful activities that will benefit both the environment and the public at large.

Health Assessment for Nursing Practice - E-Book Susan Fickert Wilson 2020-12-19 Make the most of your study time and maximize your health assessment skills!
