Body Area Networks Sandeep K. S. Gupta 2013-04-18 Body area networks (BANs) are networks of wireless sensors and medical devices embedded in clothing, worn on or implanted in the body, and have the potential to revolutionize healthcare by enabling pervasive healthcare. However, due to their critical applications affecting human health, challenges arise when designing them to ensure they are safe for the user, sustainable without requiring frequent battery replacements and secure from interference and malicious attacks. This book lays the foundations of how BANs can be redesigned from a cyber-physical systems perspective (CPS) to overcome these issues. Introducing cutting-edge theoretical and practical techniques and taking into account the unique environment-coupled characteristics of BANs, the book examines how we can re-imagine the design of safe, secure and sustainable BANs. It features real-world case studies, suggestions for further investigation and project ideas, making it invaluable for anyone involved in pervasive and mobile healthcare, telemedicine, medical apps and other cyber-physical systems.

Renaissance Mad Voyages Anthony Parr 2016-03-03 A vogue for travel 'stunts' flourished in England between 1590 and the 1620s: playful imitations or burlesques of maritime enterprise and overland travel that collectively appear to be a response to particular innovations and developments in English culture. This study is the first full length scholarly work to focus on the curious phenomenon of 'madde voiaages', as the writer William Rowley called them. Anthony Parr shows that the mad voyage (as Rowley and others conceived it) had surprisingly deep and diverse roots in traditional travel practices, in courtly play and mercantile custom, and in literary culture. Looking in detail at several of the best-documented exploits, Parr situates them in the ferment of such ventures during the period in question; but also reaches back to explore their classical and mediaeval antecedents, and considers their role in creating a template for eccentric English adventure in later centuries. Renaissance Mad Voyages brings together literary and historical enquiry in order to address the implications of an interesting and neglected cultural trend. Parr's investigation of the rash of travel exploits in the period leads to extensive research on the origins of the wager on travel and its role in the expansion of English tourism and trading activity.

Food Procces Engineering F. Xavier Malcata 2020-12-13 Food Process Engineering: Safety Assurance and Complements pursues a logical sequence of coverage of industrial processing of food and raw material where safety and complementary issues are germane. Measures to guarantee food safety are addressed at start, and the most relevant intrinsic and extrinsic factors are reviewed, followed by description of unit operations that control microbial activity via the supply of heat supply or the removal of heat. Operations prior and posterior are presented, as is the case of handling, cleaning, disinfection and rinsing, and effluent treatment and packaging, complemented by a brief introduction to industrial utilities normally present in a food plant. Key Features: Overviews the technological issues encompassing properties of food products Provides comprehensive mathematical simulation of food processes Analyzes the engineering of foods at large, and safety and complementary operations in particular, with systematic derivation of all relevant formulae Discusses equipment features required by the underlying processes

The basic aim of this book is to provide a basic knowledge in Mechanical Operations. Mechanical Operations Syllabus students of degree, diploma & AMIE courses and a useful reference for these preparing for competitive examinations. All the concepts are explained in a simple, clear and complete manner to achieve progressive learning. This book is divided into five chapters. Each chapter is well supported with the necessary illustration practical examples.

Logic and Foundations of Mathematics Andrea Cantini 2013-03-09 The IOth International Congress of Logic, Methodology and Philosophy of Science, which took place in Florence in August 1995, offered a vivid and comprehensive picture of the present state of research in all directions of Logic and Philosophy of Science. The final program counted 51 invited lectures and around 700 contributed papers, distributed in 15 sections. Following the tradition of previous LMPS-meetings, some authors, whose papers aroused particular interest, were invited to submit their works for publication in a collection of selected contributed papers. Due to the large number of interesting contributions, it was decided to split the collection into two distinct volumes: one covering the areas of Logic, Foundations of Mathematics and Computer Science, the other focusing on the general Philosophy of Science and the Foundations of Physics. As a leading choice criterion for the present volume, we tried to combine papers containing relevant technical results in pure and applied logic with papers devoted to conceptual analyses, deeply rooted in advanced present-day research. After all, we believe this is part of the genuine spirit underlying the whole enterprise of LMPS studies.
