Die Hälfte der Erde Edward O. Wilson 2016-09-26 Die Hälfte der Erdoberfläche der Natur zu überlassen – das ist die Forderung des weltberühmten Biologen Edward O. Wilson. Sein Buch ist das Testament eines großen Forschers und Schriftstellers, der wie kein anderer erkannt hat, dass der Mensch trotz aller unübersehbaren Fortschritte eine biologische Spezies bleibt, die den früheren Lebensbedingungen auf unserem Planeten besser angepasst ist als der Umwelt, die wir gerade erschaffen. Geschichte zu haben ist kein Privileg des Menschen. Und dennoch ignorieren wir die Geschichten von Millionen anderen Arten, die durch unser Verhalten vom Aussterben bedroht sind. Wilson ist davon überzeugt, dass wir nur dann den lebendigen Anteil unserer Umwelt retten und die für unser eigenes Überleben nötige Stabilität herstellen können, wenn wir den halben Planeten zum Naturschutzgebiet erklären. Wenn die Menschheit sich nicht sehr viel mehr Wissen über die globale Lebensvielfalt aneignet und sich nicht schnell dazu entschließt, sie zu schützen, dann werden wir schon bald die meisten Arten, in denen sich das Leben auf der Erde manifestiert, unwiederbringlich verlieren.

David Levithan beschreibt auf eine fesselnde Art und Weise die Geschichte von Rhiannon, die das Geheimnis von A und ihre Liebe zu ihm entdeckt. Rhiannon liebt ihren Freund Justin, auch wenn der sie in der Schule eiskalt abblitzen lässt. So ist er halt. Und wenn Rhiannon auf der Rückfahrt von der Schule den Radiosender wechseln will, kommt von Justin "Mein Auto, meine Musik". Lädt Rhiannon ihn zu einer Party ein, beschwert er sich, dass sie ihn immer 'festnageln' will. Eines Tages ist plötzlich alles anders: Justin lässt Rhiannon die Musik aussuchen, er singt aus voller Kehle mit und hört ihr aufmerksam zu. Rhiannon ist überglücklich. Doch dann kommt ein Fremder und behauptet, dass er für einen Tag in Justins Körper gewesen ist... »Wenn Glück sich so gut anfühlt, ist es eigentlich egal, ob es tatsächlich echt ist oder nicht.« Die langersehnte Fortsetzung von David Levithans Weltbestseller »Letztendlich sind wir dem Universum egal« erzählt das, was uns alle beschäftigt hat: Wie fühlt es sich an, wenn die Liebe deines Lebens jeden Tag in einem anderen Körper steckt? Ein cooler und romantischer Roman über Geborgenheit, Verlässlichkeit und die wahre Liebe. »Letztendlich sind wir dem Universum egal« ist Gewinner des Deutschen Jugendliteraturpreise 2015, Kategorie Jugendjury.

Life Concepts from Aristotle to Darwin Lucas John Mix 2018-08-29 This book traces the history of life-concepts, with a focus on the vegetable souls of Aristotle, investigating how they were interpreted and eventually replaced by evolutionary biology. Philosophers have long struggled with the relationship between physics, physiology, and psychology, asking questions of organization, purpose, and agency. For two millennia, the vegetable soul, nutrition, and reproduction were commonly used to understand basic life and connect it to “higher” animal and vegetable life. Cartesian dualism and mechanism destroyed this bridge and left biology without an organizing principle until Darwin. Modern biology parallels Aristotelian vegetable life-concepts, but remains incompatible with the animal, rational, subjective, and spiritual life-concepts that developed through the centuries. Recent discoveries call for a second look at Aristotle’s ideas – though not their medieval descendants. Life remains an active, chemical process whose cause, identity, and purpose is self-perpetuation.

Für Liesel jedoch bricht eine Zeit voller Hoffnung, voll schieren Glücks an – in dem Augenblick, als sie zu stehen beginnt. Anfangs ist es nur ein Buch, das im Schnee liegen geblieben ist. Dann eines, das sie aus dem Feuer rettet. Dann Äpfel, Kartoffeln und Zwiebeln. Das Herz von Rudi. Die Herzen von Hans und Rosa Hubermann. Das Herz von Max. Und das des Todes. Denn selbst der Tod hat ein Herz. Eine unvergessliche Geschichte vom dunkelsten und doch brillantesten aller Erzähler: dem Tod. Science Teachers' Learning National Academies of Sciences, Engineering, and Medicine 2016-01-15 Currently, many states are adopting the Next Generation Science Standards (NGSS) or are revising their own state standards in ways that reflect the NGSS. For students and schools, the implementation of any science standards rests with teachers. For those teachers, an evolving understanding about how best to teach science represents a significant transition in the way science is currently taught in most classrooms and it will require most science teachers to change how they teach. That change will require learning opportunities for teachers that reinforce and expand their knowledge of the major ideas and concepts in science, their familiarity with a range of instructional strategies, and the skills to implement those strategies in the classroom.

Providing these kinds of learning opportunities in turn will require profound changes to current approaches to supporting teachers' learning across their careers, from their initial training to continuing professional development. A teacher's capability to improve students' scientific understanding is heavily influenced by the school and district in which they work, the community in which the school is located, and the larger professional communities to which they belong. Science Teachers' Learning provides guidance for schools and districts on how best to support teachers' learning and how to implement successful programs for professional development. This report makes actionable recommendations for science teachers' learning that take a broad view of what is known about science education, how and when teachers learn, and education policies that directly and indirectly shape what teachers are able to learn and teach. The challenge of developing the expertise teachers need to implement the NGSS presents an opportunity to rethink professional learning for science teachers. Science Teachers' Learning will be a valuable resource for classrooms, departments, schools, districts, and professional organizations as they move to new ways to teach science.
